## Timberworks Housewrights Firescreen Form

This form is to provide a way for you to submit your firescreen requirements to Timberworks. Please look over the options listed below and provide as much information as possible.

When you are ready to send the form, hit the “Submit” button. This action will extract your entries from the form and send the data to Timberworks through your E-mail provider. As there is no way for you to save your form entries, you should print your completed form BEFORE you press the “Submit” button.

We will also need you to send us your artwork to use. We can use most common photo or bitmap formats (jpg, bmp, gif, eps, xcf, psd) as long as we can convert it into simple line-art. Please send your artwork to the address above (if on disk) or E-mail your file by [Clicking Here](#).

Once we receive your data and requirements we will contact you to confirm pricing and before moving ahead. Before we work on your design or begin fabrication we will require you to submit your order on-line by [Clicking Here](#).

Date

### My Contact Information:

---

My name:

First:

Last:

Address:

Address line 2:

City/Town:

State:

Postal code:

Telephone:

000-000-0000 format please!

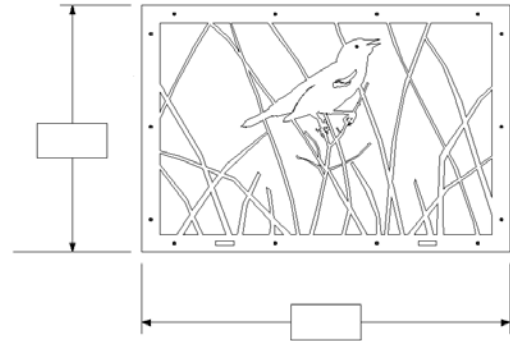

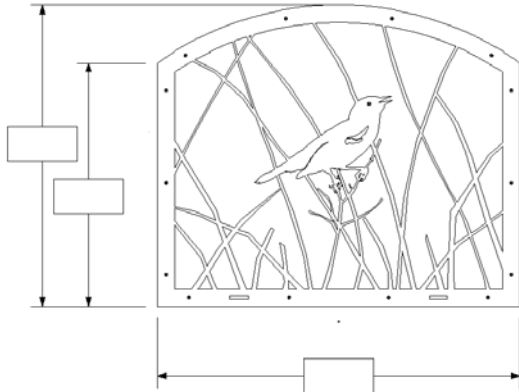

E-mail:

My firescreen will be:

Arched top

Rectangular

Please enter the dimensions in inches where appropriate:

**NOTE:** If your firescreen is to fit INTO a masonry opening be very careful with your dimensions. Many openings are out-of-square and vary in dimension. We **STRONGLY** recommend that you create a cardboard template and test fit the size physically into your opening. Remember to leave some space to allow you to insert and remove the screen easily. You may then fold up your template and send it to us. Your firescreen is a custom order and custom built item. Unless we make a mistake, the dimensions you provide will be the actual screen size and **ALL FIRESCREENS ARE NON-RETURNABLE ITEMS.**

My firescreen artwork will be rendered as a:

Positive image

Negative image

What this means is, as in the examples above, the dark areas will be solid and the light areas will be open. Keep in mind that some artwork will not work very well as a negative image (as in the example). Some designs will block your view of the fire and heat output. Consider this option carefully while selecting your artwork!

All standard firescreens include the screen design & fabrication, adjustable feet, steel screening, forged fasteners and one stainless steel coil handle. Everything, excluding the handle, is painted with flat black high-temperature paint. If you would like any other options, please list them here:
